C-DEV-120

## Freeads

---

Create your own free-publishing ads website

# Freeads

delivery method: freeads on Github  
language: Laravel & PHP

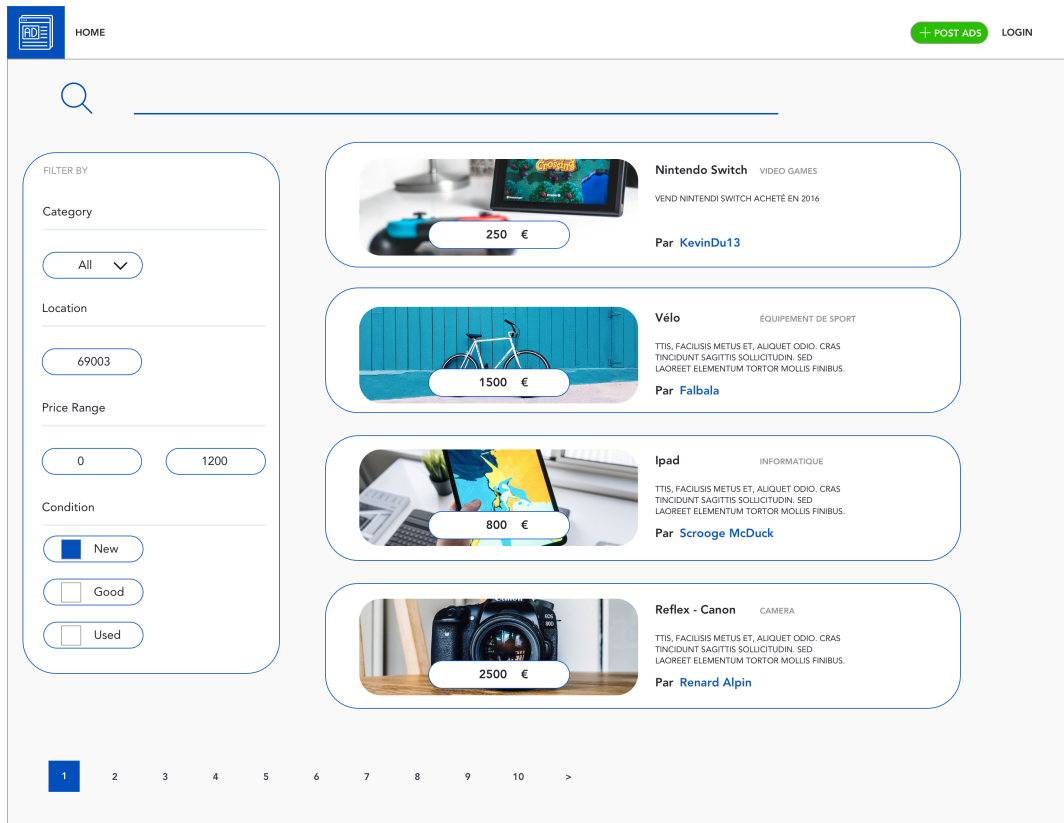

- Error messages have to be written on the error output, and the program should then exit with the 84 error code (0 if there is no error).

## GENERAL INFOS

Create a free-publishing ads website with Laravel.  
You can use this design or be creative and create you own.

## STEP 1 - USER PROFILE

---

1. Create an Eloquent Model `User` using Laravel **Eloquent ORM**
  - a. An User must at least have :
    - login
    - password
    - email
    - phone number
2. Create a authentication system (sign-up and login) with all the corresponding views.
  - a. A confirmation mail must be sent to a newly registered user to verify its account **Email Verification**
3. Create CRUD and the corresponding view

## STEP 2 - ADS SYSTEM

---

1. Create a model `Ads` and its corresponding controller.
  - a. An ad must at least have :
    - title
    - category
    - description
    - at least one photo
    - price
    - location
- A view allowing an authenticated user to post a new ad
- A view to display all ads in rows as seen in the Homepage design
- A view to display a specific ad
- A view to edit and modify your own ads

## STEP 3 - FILTER SYSTEM AND SEARCH BAR

---

1. Create a search bar
2. Create the filter system from the homepage (by Category, Location, Price Range and/or Condition)

## STEP 4 - OPTIONAL

---

1. Optimize SEO (create a footer, etc)
2. Responsive design (in 2020 up to 52% of all internet traffic is done using a mobile device)
3. Write unit-test for quality assurance of your own code [Laravel Testing](#)
4. Deploy your website on a true server such as [OVH VPS](#)
